

# The Ai-Powered, Universal Portal to ALL Your Data...

*Implement the latest technologies in your own environment,  
and grow your organization exponentially!*

## Deployment:

**Assisted On-Boarding:** A dedicated engineer will work with you throughout the entire process until you are fully implemented.

**Training:** All users will be trained on the use of the system as well as more in-depth training to IT support staff.

**Service:** We can provide customized services to tailor the system to your exact requirements.

**Support:** A dedicated team of support engineers are available 24/7 to help you with your technical needs (4-hr response time for after-hours).

## Benefits:

**Save Time:** With all the automation of your data handling, hours of valuable time can be re-allocated to mission critical brain-engaging tasks.

**Save Money:** By accessing your data through Univue connectors, you will save on overall efficiency and software licensing costs.

**Communication:** With tight integration of data and processes, real-time status and activities can be better communicated to all levels of the organization.

**User Engagement:** Giving access to more data and capabilities empowers everyone to be more engaged in the company's purpose, goals and objectives.

## Features:

**AI Integration:** Built-in AI engine will assist in performing intelligent searching and analysis of your data.

**Robotic Process Automation (RPA):** Repetitive tasks on any desktop or web app can be automated.

**Visualization:** Using built-in and user-customizable interactive dashboards, visualize and analyze your data to track your KPI, OKR, or real-time IOT sensor data.

**Data Connector:** Bi-directionally connect your external data stored in existing software, like ERP, CRM, Accounting, Engineering software, even local/network/cloud file storage.

**IOT Connector:** Connect your smart sensors and even legacy machinery to Univue to get real-time status on I/O (inputs & outputs).

**Data Processing:** Anything connected to Univue can be used to create automated routines for performing actions based on the underlying data. Think of it as a Cloud -based processor.

**Automated Data Mining:** Extract or scrape data from remote sources like databases, web pages & spreadsheets.

**Event-Driven Alerts & Messaging:** Any change in the connected data can kick-off alerts and customized messages via email or SMS. Alerts and messages can even be automatically displayed on any connected device, like factory displays or smart TV's.

**Scheduled Tasks:** Using the built-in scheduler, everyone can stay up-to-date on everything related to day-to-day operations.

## Pricing & ROI:

**Affordable:** Monthly or Annual subscription starting at \$50/user/month.

**Sustainable:** User maintained system does not require dedicated IT staff. All users are able to utilize and customize their own areas of interaction with the system.

**Scalable:** Due to flexible cloud architecture, your system will grow as your needs grow, so you don't have up-front costly infrastructure costs in software or hardware.

**Justifiable:** Your Return on Investment (ROI) will be weeks or months, not years
